RETAIL CUSTOMER RETENTION ANALYTICS

– ADIDAS –

POWER BI DASHBOARD PROJECT REPORT

As part of my Business Analyst journey, this report presents a comprehensive analysis of customer retention strategies at Adidas through Power BI analytics. By examining key metrics including churn rate, customer lifetime value, loyalty program engagement, and regional performance, I aim to demonstrate proficiency in leveraging business intelligence and data science to develop actionable insights for enhancing customer loyalty and driving sustainable growth.

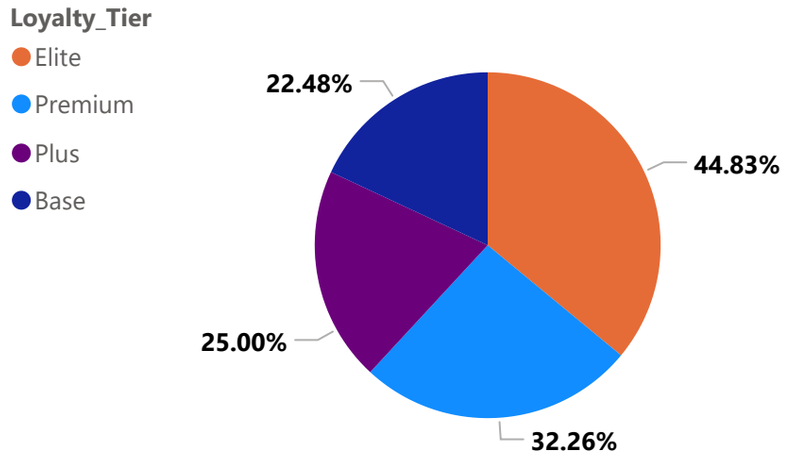
Churn Rate by Loyalty



Recommendations

- Elite tier churn is critically high at 44.83% — the highest of all tiers Adidas must immediately redesign Elite benefits with exclusive VIP experiences and personalized rewards.
- Across all tiers, there is a combined 469K+ unredeemed points gap (Base: 263K, Plus: 204K, Premium: 141K, Elite: 33K) — simplifying redemption and automating point-expiry reminders will unlock this latent loyalty value
- With 52.70% of transactions using promotions and a 5.3% spending uplift (₹272.43 vs ₹258.79), tier-specific promotional campaigns will both reduce churn and increase average transaction value.
